A site inspection of the above named facility was conducted on January 30, 1985 by Sue Ryan and Chris Nolan. American Louver is a small quantity generator under RCRA and generates 25 gallons per week of waste paint varnish with solvents. This waste is stored in an underground, 250 gallon, stainless steel tank and pumped out into a tanker for off-site incineration every 60 days.

The hazardous waste stored on-site, prior to shipment off-site for disposal, is regulated under RCRA and therefore, the waste quantity to be considered for HRS purposes is zero. Also the groundwater is not used for drinking water in the area. For these reasons, I recommend that the site not be scored.
